DETAILED ACTION

This Office Action is in response to the Transmittal of New Application filed on October 21, 2003.

Status of Claims

Claim 1 is pending.

Priority

1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

3. Claim 1 is rejected under 35 U.S.C. 102(a) as being anticipated by JP02002124532 to Tanaka.

In reference to Claim 1, Tanaka teaches:

- a wafer (1) with copper bonding pad (10) being provided; (See Figures 1-4 and paragraphs 0004-0031)
- covering the copper bonding pad of the wafer with an anti-oxidation protective film (11) which will be vaporized when heated in the course of fabricating copper bonding pad of the wafer to protect the copper bonding pad from being oxidized, providing a longer shelf-life; (See Figures 1-4 and paragraphs 0004-0031) and

Art Unit: 2813

- performing wire bonding directly without requiring the removal of the protective film, employing mechanical energy such as ultrasonic vibration energy, pressurizing deformation energy and heat energy in the course of bonding to vaporize the protective film so that the metal wire (30) and the copper bonding pad form into a large area inter-metallic compound layer for bonding (See Figures 1-4 and paragraphs 0004-0031)
